

FRMS compliance solutions | Practical fire extinguisher training

Course title:	Practical fire extinguisher training
Location:	At your premises or at one of our regional offices.
Cost:	£400 + VAT per course (held at your premises) for up to 10 delegates.
Duration:	2.5 hours

Like most employers you are probably giving your staff basic fire safety training as is required by Law. This training probably includes some basic information around the type and use of fire extinguishers but doesn't include practical hands on training.

Fire authorities will be seeking compliance from employer responsible persons by identifying that the training of an adequate number of employees to undertake first aid fire-fighting duties has been conducted.

We at Frankham understand the limitations and practicalities of live fire extinguisher training which requires an outdoor space where live fires can be lit, where extinguishers can be discharged and where employees can engage with the training in business attire, when the weather might be inclement. As a result most employer's opt for a classroom based theoretical session which is often boring and tends not to give adequate levels of training.

So we decided to search for a solution for our clients and created an industry leading, cost effective, practical, hands on, engaging fire extinguisher training course that can be undertaken indoors, in any location at any time of day, in any weather.

Our course is made possible by the recent acquisition of the cutting edge **BullsEye™** Laser-Driven Fire Extinguisher Training System.

Overview

BullsEye uses advanced laser technology to simulate the discharge of foam/water or CO2 extinguishers for a completely clean, safe and cost effective training experience. BullsEye senses where the user aims and sweeps a laser training extinguisher and automatically varies the LED driven digital flames in response.

This allows your trainees to learn how to effectively use a fire extinguisher in their actual work environment. Training can now take place completely indoors - allowing you to train anywhere, anytime.

Our training solution is Clean, Cost effective, Safe and most importantly realistic and engaging.

Course Format:

The course follows recognised methodology for delivery:

1. Fire precautions regulations/legislation
2. Chemistry of fire and how fire spreads
3. Types and classifications of fires
4. Common causes of fire
5. Hazard spotting/hazard reduction
6. Fire extinguishers: theory
7. Fire extinguishers: practical use of Bullseye system

Who should attend?

This course is suitable for all staff of all levels, the training is particularly suited to the corporate office environment, hospitality, industrial, and healthcare. Tailored courses for operational social housing staff and contractors are also available.

How to book
